

Assess specific aspects of your cybersecurity program and technology

Intrusions occur everywhere, confirm your organization's preparedness

Ensure your security programs function as designed...

- Boards and executives often do not receive sufficient insight into whether their cybersecurity investments are functioning as intended once programs are implemented
- Next Peak provides workshops to assess specific aspects of your company's cybersecurity program in order to objectively review, calibrate and fine-tune operational activities. Focused workshops highlight successes and challenges, and deliver actionable improvement recommendations based on experience and industry best practices
- Our workshops are conducted in close collaboration with your security teams, with workshop topics and content driven by your team's top concerns and based on your company's security priorities and strategic objectives

Efficient cyber workshops to ensure that your programs are functioning as they should

...providing confidence in your organization's security.

- Next Peak provides workshops on an array of cyber defense topics, including endpoint protection, vulnerability management, data governance, and identity and access management, with deep expertise on many other cyber defense areas
- The Next Peak team is led by cyber warriors with experience designing and facilitating security programs for the highest caliber organizations including the US military, the National Security Council, and F500 institutions
